

Anti –Jamming Device AJD-100

The AJD-100 is intended for using with GSM /CDMA Car security /tracking devices. The Car security device are made useless by the activation of a RF Signal Blocker /Jamming Device . These Devices block all sort of GSM/CDMA signal so the car thief can easily take away the car by putting a Signal Jamming device inside.

With AJD-100 device installed .The car will be disabled as soon as the Jamming device becomes active. The Car will remain inoperative for 2 min even after the Jamming device is switch off thus ensuring that the thief can not take the car.

Operation

The Device once power up remains in Idle state with LED flashing at a slow rate. And Relay is in OFF state. Once signal is detected the LED would flash at a faster rate and device will start a timer. If the Signal remain Active for more then 45Sec The Relay would be switched ON and LED Would Stop flashing. The Device will enter a Lock state for 2 min. Turning the device Off/ON will not reset the lock condition.

Specification

Working Voltage	9V DC To 18V DC
Operating Current	Idle State 25ma. Relay Active 100ma
Sensitivity	-45dbm 400Mhz to 2000Mhz
Signal On Time	45Sec .
Lock Time	120Sec
Relay	10A NC and 15A NO
Dimension	82mmx20mmx22mm
